DETAILED ACTION

This Office Action corresponds to application 10/776,004 filed 2/10/2004.

Claims 1, 15, and 23 have been amended. The previous objection to claim 1 has been withdrawn in light of the amendments.

Claims 1, 2, 5-7, 9, 12-15, and 18-25 (now 1-18) have been allowed over the prior art of record.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone correspondence with Robert Kelly (33,922) on 12/23/2011.

The application has been amended as follows:

Claim 21 has been amended to recite "The ~~apparatus~~ mobile node of claim 1 wherein said first hash technique comprises a checksum process."

Reasons for Allowance

The primary reason for indicating allowance is as follows:

The prior art found of record does not appear to specifically teach each and every limitation of independent the claims as they are recited among the combination of claimed elements. Specifically, the prior art of record does not appear to readily teach or suggest, alone or in reasonable combination:

i) generate a first hash pursuant to a first hash technique of a first computational intensity and based upon the database values of the mobile-copy database, and communicate said first hash to the network part in a first message on a communications channel of the radio communication system, whereby an out of match condition between the mobile-copy database values and the network-copy database values is determined,

ii) generate, upon a determination of an out of match condition between mobile-copy database values and network-copy database values, a second hash pursuant to a second hash technique of a second computational intensity and based upon the database records in the mobile-copy database, and communicate the entirety of said second hash to the network part in a second message on said communications channel, in which said second computational intensity is greater than said first computational intensity and requires a greater amount of communication channel capacity to communicate said second message than said first message, whereby an out

of match condition between a record of the mobile-copy database records and a corresponding record of the network-copy database records is determined.

The closest found prior art on record, namely Yianilos et al. (2002/0029214), at best teaches two hash operations "Get_All_Hashes" and "Get_Interval_Hashes" to correspond to a first and second hash technique of the claimed invention. Yianilos, however, does not specifically teach one of these hash operations based on database values and the other based on database records. Conversely, and as agreed with Applicant's most recent arguments, page 12, Yianilos teaches that both Yianilos' equivalent hashes are based upon the digests of the database records. See the definitions of Get_All_Hashes and Get Interval Hashes and paragraph 0083.

Accordingly, the aforementioned element in combination with the other recited elements as found in independent claims 1, 15, and 23 is not anticipated alone or readily suggested in combination with the prior art of record. All depending claims incorporate the allowable subject matter indicated above and therefore are allowed accordingly.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
